IV. Illustrative Time Line For Academically Well Prepared Ph.D. Physics Graduate Students ...... 23
INFORMATION FOR GRADUATE STUDENTS
DEPARTMENT OF PHYSICS

MS in Physics
Ph.D. in Physics
and
Ph.D. in Engineering Physics

MICHIGAN TECHNOLOGICAL UNIVERSITY

2013-2014
INFORMATION FOR GRADUATE STUDENTS
DEPARTMENT OF PHYSICS

The following information has been compiled to assist graduate students with their adjustment to Graduate School and to outline the requirements and procedures for obtaining an advanced degree in the Department of Physics. The information supplied herein is more specific than that in the Graduate School Catalog as it applies to our programs: M.S. in Physics, Ph.D. in Physics, and Ph.D. in Engineering Physics. Students should familiarize themselves with this document and the general regulations of the Graduate School as found in the Graduate School’s Academics web pages (http://www.mtu.edu/gradschool/administration/academics/), which covers policies and procedures, degree requirements, necessary forms, and more. The Graduate School website http://www.mtu.edu/gradschool/resources-for/current/ also contains a wealth of information for current students. Convenient links to on-line versions of many of these and other documents are also available on the physics department web pages: http://www.phy.mtu.edu/graddegrees/gradresource.html

I. Facilities and General Information

A. Department Structure

The physics department is a community of scholars and professional staff working together to further the mission of the department and the University. Major academic responsibilities in the department are handled by the department chair and several important faculty committees.

Department Chair: Dr. Ravi Pandey
Physics Graduate Studies Committee: Dr. Donald Beck, Chair
Engineering Physics Graduate Studies Committee: Dr. Yoke Khin Yap, Chair
Qualifying Exam Committee: Dr. Robert Nemiroff, Chair
Department Staff:
  Andrea Lappi- Department Coordinator
  Jesse Nordeng- Machinist & Safety Coordinator
  Marg Rohrer- Secretary
  Scott Rutterbrush- Laboratory/Systems Associate
  William Slough- Laboratory Coordinator
  Kathy Wollan- Secretary

Tolga Yapici - Graduate Student Government Representative
B. Keys, Desk, Computers, and Research Space Assignments

Each graduate student in residence is provided a desk for personal use in an office and after-hours access to that office. A student's Tech Express identification card and assigned M-number grant after-hours admission to Fisher Hall via the main door on US41 by the large lecture halls. Office and teaching laboratory keys are ordered by the department coordinator. Students working on research projects may be issued keys to project laboratories upon approval of the faculty member responsible for that laboratory. Requests for new keys, replacements for lost keys, or swipe-card access to restricted areas should be made to the department coordinator. Keys must not be passed on to anyone else, or duplicated, under ANY circumstances. Lending or duplication of keys is grounds for dismissal. Lost keys need to be reported to supervisors as soon as they are noticed to be missing. A $100 FEE IS ASSESSED FOR ANY KEY LOST OR NOT RETURNED TO PUBLIC SAFETY.

All graduate students are provided computer access through computers in several common areas (Fisher Hall 330) and offices. Computers for research use are provided by research advisors. Questions and problems with computers should be directed to the Information Technology (IT) Help Desk, which you can contact on the first floor in the library or via email at it-help@mtu.edu (www.it.mtu.edu). The IT staff can supply you with your username and password assistance. Please change your password the first time you log into your account. Please read the usage policies for using physics computers as well as using any Michigan Tech computer facilities as soon as you begin using the computers. Computer use policies are available on our website at: http://www.phy.mtu.edu/basiccomputing/policy.html. Students should pay particular attention to Michigan Tech computer use policies regarding copyrights, privacy, passwords, and hacking. These can be found through the link at the above web site, or directly at http://www.it.mtu.edu/OIT/documents/computer_use_policy.pdf.

C. E-Mail, Mail Service, Photocopier, Supplies, Printers

E-Mail is the department’s primary communication tool with graduate students, including issues such as financial support, graduate program obligations and responsibilities, and semester timelines and deadlines, to name a few. You are expected to be responsive to departmental e-mails at all times.

Mail is delivered daily to physics around 1:30 p.m. Student mailboxes are located in the main office, Fisher Hall 118. It is advisable to check your mailbox daily for mail and messages.

Photocopying, laser printers, and office supplies are available in the physics department for graduate students to use for research and teaching purposes only. Departmental resources are limited, so efficiencies such as double-sided printing and copying are appreciated. Please see one of the secretaries for your photocopier access code. Also note that there are important national laws regarding photocopying copyrighted materials. If you have a question about copyright law please inquire in the library or see http://www.admin.mtu.edu/admin/procmam/ch13/ch13p10.htm. Access to supplies (paper, pens, transparencies, etc.) should be requested through one of the secretaries in the physics main office.

D. Work Obligation of Teaching Assistants
Graduate teaching assistants should expect to devote 20 hours per week to their teaching obligations including office hours set aside to help individual students. Office hours should be a minimum of two hours per week and should be posted both on the syllabus and outside the office door. Students employed by the Department of Physics as teaching assistants are reminded that they serve as representatives of the department - this should be reflected in their comportment. Teaching assistants are required to follow all applicable employee policies. Their immediate supervisor is the laboratory coordinator.

E. Work Obligation of Research Assistants

On the average, students supported by graduate research assistantships are expected to work 40 hours per week (including approved course work) for the research project from which the stipend and tuition is paid. Since all support monies are derived from government or industry contracts and grants, it is the student’s responsibility to perform assigned research tasks in a timely manner. It should be noted that most contracts require formal progress reports on the research performed. The immediate supervisor of research assistants is their research advisor.

F. Safety

There are a number of safety policies and procedures in effect at Michigan Tech that particularly apply to graduate students, such as those concerning hazardous waste, housekeeping, and safety orientation. Copies of these policies are supplied separately. Please read them carefully. Additional safety policies concern students conducting research using the machine shop, any research or teaching laboratories, or using chemicals. Please consult your research advisor regarding all applicable safety policies and procedures before beginning work. Students must read the Physics Laboratory Safety rules and the General Laboratory Safety rules, and sign the Laboratory Worker Safety Agreement before beginning work. Questions can also be directed to the safety coordinator or department chair.

For safety purposes, visitors are not permitted in research and instructional labs unless written permission has been granted by the department chair; this includes spouses and children. There have been incidents in other departments where unauthorized visitors, including children, have had accidents causing themselves harm. This rule is designed to prevent this type of tragedy.

For your reference, the Michigan Tech safety manual is available on line at: http://www.sas.it.mtu.edu/fm/osh/

G. Absence Policy

Students receiving financial aid through the University (teaching assistantship, research assistantship, fellowship) are entitled to staff holidays. Please note that the breaks between academic terms and the break at Christmas are not automatically considered as holidays or time off. In the case of GRAs, excused absences must be arranged with the faculty advisor, and approved by the department chair on the physics absence form available online http://www.phy.mtu.edu/graduate/absence.html. GTAs follow a similar policy, but require the approval of the department chair and laboratory coordinator. In general, all graduate students may take up to two weeks off campus each year, excepting that in NO CASE may it be during an academic term or finals week. PRIOR written authorization is required from the department chair, in consultation with student's advisor, the Chair of the Graduate Studies Committee, and in the case of GTAs, the laboratory coordinator. Written approval is required for international travel http://www.admin.mtu.edu/acct/forms/travel/index.html, in addition
to the absence request form. Any absence which does not follow this policy will result in an automatic deduction of pay and disciplinary action.

H. Colloquium

The department organizes a colloquium series held on Thursday at 4:00 p.m. in Fisher Hall 139. Its purpose is to broaden the education of each student by bringing to campus leaders in various areas of physics. Attendance is required of all students seeking graduate degrees from our department, and is explicitly stated in the course descriptions for the department’s graduate research courses: PH5010, PH5975, PH5999, PH6975, PH6999. In addition to being an important educational experience, attendance at colloquia is also a professional courtesy to your colleagues and to the invited speakers. Students habitually missing department colloquia will face appropriate actions.

Students in their second year of study and beyond participate in the colloquium series through a departmental poster session and/or a 20-minute talk regarding their research. This provides opportunities for constructive feedback, practice in giving professional presentations, and increase awareness of the exciting research being done in the department. Additional details of this activity will be emailed to you later.
I. Academic Integrity

The University and the physics department expect all students to maintain the highest level of academic and scientific integrity in all aspects of their studies, from class work to exams to research. If you are unsure or have any specific questions about assignments, projects, examinations, etc., please ASK your instructor.

A detailed booklet describing Michigan Tech's academic integrity policy and procedures, including definitions of plagiarism, cheating, fabrication, and facilitating academic dishonesty, is available from the Dean of Students office, or on the web at: http://www.mtu.edu/gradschool/administration/academics/policies-procedures/conduct/ All graduate students should carefully read this policy. Students must also view the orientation module on academic integrity at: http://www.gradschool.mtu.edu/orientation/orientation_modules.html

Further information on Scientific Misconduct Procedures may be found at and at: http://www.admin.mtu.edu/admin/prov/facbook/appf/fapp.htm.

J. International Students

Upon arrival on campus all international students must register with the Office of International Programs and Services located in room 200 of the Administration Building. All matters concerning employment practice, visa renewals, and related matters are handled through this office. Changes in I-20 forms are handled in the Graduate School.

All international students whose native language is not English must take an English Language Assessment. This assessment is administered through the Center for Teaching and Learning, Van Pelt and Opie Library 239. It is offered on a walk-in basis several times during orientation and should take about 15 minutes. More detail can be found at http://www.mtu.edu/ctl/for-graduate-teaching-assistants/orientation/

Additionally, all first-time international students must attend the International Graduate Teaching Assistants Assistance Program (IGTAAP). Students’ language skills and their cultural competency will be assessed and students will be provided with services on an as-needed basis so that they can in turn provide better service to our undergraduates and faculty while serving as graduate teaching assistants. Additional information is here http://www.mtu.edu/ctl/for-graduate-teaching-assistants/igtaap/

In order to be visa compliant, international students must register as full time students. Questions regarding I-20 forms, visa status, and full-time student status may be directed to the Graduate School.

K. Stipend, Tuition, and Health Care

Graduate teaching assistants and graduate research assistants are paid a stipend set by the Graduate School and, in some cases, their research advisor. Stipend levels generally increase as you progress toward your degree and submit the required M- and D- forms (see the Graduate School web site for details). Stipend payments are issued bi-weekly. Supported graduate students must be enrolled for nine credits each semester during the academic year and one credit in the summer, with tuition paid directly by the department or research grant. Tuition charges in excess of these values will be your responsibility unless you make prior arrangements with your research advisor and the department chair.

Limited summer teaching appointments are available to graduate students making satisfactory progress toward their degree, but are dependent upon availability of funds.
Graduate students are required to enroll in the Michigan Tech graduate student health insurance program or provide proof of comparable insurance coverage. Supported students (GRA, GTA) receive partial support toward their health insurance coverage as part of their support. More information about health insurance and health care can be found at http://www.admin.mtu.edu/hro/stud%20insurance/index.shtml. Questions regarding health insurance coverage can be addressed to the physics department representative to the Graduate Student Government (listed on page 1) or to Human Resources.

L. Physics Learning Center

The Physics Learning Center (PLC) was established primarily for the enhancement of undergraduate learning in our general physics classes. It is staffed by a team of undergraduate coaches from several disciplines and is currently located in room 128 Fisher Hall. The PLC’s operations and policies are monitored by a student head coach and PLC faculty coordinator, Dr. Robert Weidman.

The PLC also houses the physics department “library” and attractive study space. Graduate students wishing use the PLC shall honor policy by giving use of the room to PLC instruction as first priority and using the room quietly when instruction is taking place. Please make sure the door is locked at all times unless occupied by PLC coaches, physics graduate students, or faculty. See the PLC faculty coordinator, Dr. Weidman, if you have any questions.

II. Advisors

Advisors help students structure a program of study which addresses their needs and satisfies degree requirements. New students are initially assigned the Chair of the Graduate Studies Committee as their advisor. The Graduate Studies Committee facilitates a student's selection of a research advisor. Once a research advisor is selected an Advisory Committee is formed for each student. The Advisory Committee prepares a program of course study and research work that will lead to the desired graduate degree. It is up to the student and their advisor to fill out, get signed, and submit the appropriate forms for the Graduate School (M for M.S. degree; D for Ph.D. degree) at the appropriate times (see this link for current forms and instructions): http://www.mtu.edu/gradschool/administration/academics/forms-deadlines/
A. Course-Work Advisor

The Graduate Studies Committee chair currently serves as course work advisor for all entering physics graduate students. Entering students prepare their fall-semester course schedules in consultation with him during orientation before the start of the first semester. During the third week of classes in the fall, first year students need to meet with their advisor to prepare a course schedule for spring semester. Students may register for classes after consultation with their advisor. During the spring semester, continuing students can register for both the summer term and the next fall semester.

A first year student with a graduate teaching assistantship typically takes three courses each semester. Course loads are substantially reduced in subsequent years when the bulk of the student's effort is devoted to research. The University requires that full time graduate students receiving stipends register for nine credit hours per semester. To be considered full time, students must register for a minimum of one credit or one course during the summer term. Please consult with your advisor and with the Graduate Studies Committee chair for updates regarding rules for support and full-time status, especially during the summer and in the semesters you are nearing graduation. Once students finish required courses and examinations they may petition to enter "research only mode" by submitting a form to the Graduate School [http://www.mtu.edu/gradschool/administration/academics/forms-deadlines/pdfs/ResearchOnlyMode.pdf](http://www.mtu.edu/gradschool/administration/academics/forms-deadlines/pdfs/ResearchOnlyMode.pdf) and subsequently enrolling in PH5975 (MS) or PH6975 (PhD). Students must still maintain full-time status but are eligible for a lower full-time research tuition rate. Students enrolled in either of these courses may not register concurrently for any other course. Students should check with the Graduate School in advance for the most up-to-date requirements.

Courses may be taken outside of physics ONLY with the written pre-approval of the department chair, the Graduate Studies Committee chair, and the student's research advisor. Permission forms are available on our web site [http://www.phy.mtu.edu/graddegrees/nonphysics.html](http://www.phy.mtu.edu/graddegrees/nonphysics.html) Typically, such approval requires that students have taken or are taking required physics courses being offered during the same term. In general, approval will be granted for taking only one course per term outside of physics. Graduate research assistants are expected to work full time on their research and studies. Graduate students supported financially by the physics department may not be on the payroll of other departments. If this procedure is not followed, you will be billed for the tuition charges incurred.
B. Research Advisors - The Selection Process

The process described below is intended to assist all first-year students in becoming familiar with research interests of the faculty prior to selecting a research advisor. Ambitious students may select a research advisor outside of this process if desired. While it is hoped that the student/advisor relationship will prove satisfactory for all concerned, in those instances where expectations are not met it is possible for a student to change research advisors in consultation with the Graduate Studies Committee. After a student selects a research advisor the Advisor and Committee Recommendation Form (http://www.mtu.edu/gradschool/administration/academics/forms-deadlines/pdfs/advisor-committee.pdf) should be completed (online), printed, and filed with the department and Graduate School.

The process of selecting a permanent faculty research advisor should begin for most students during thefall semester of the first year of residence when all new students are required to take PH5010 Journal Club. Each member of the research faculty will present a brief description of research activities in a series of 20-25 minute presentations scheduled throughout the fall semester. All first year students are required to attend all of these faculty research talks - attendance will be taken. Students are expected to follow up with individual interviews with those faculty members whose projects are of interest. These individual sessions may be used to discuss specific research projects and availability of funding, but no formal or informal agreement as to research advisor selection normally is made at this time.

Upon completion of the research presentations and after suitable time for follow up interviews, each student should meet with their first choice of a research advisor and request that they assume the role as their research advisor. The proposed research advisor and student may agree to a trial period to see how the working relationship develops. Students having difficulty finding a research advisor, or students wishing to change research advisors, should consult with the Graduate Studies Committee and department chairs as soon as possible. First-year students unable to find a research advisor must notify the Graduate Studies Committee and department chairs before the eighth week of spring semester so that the process can be facilitated.

Students may want to consider the following when choosing advisors: 1) interests in research area, 2) track record of advisor-papers, funding, student graduation, and job success, and 3) current research group size. Please be aware that the availability of any particular research project is governed by the availability of funds to support that research.
C. Advisory Committee

Each student accepted into the graduate program in the Department of Physics is assigned an Advisory Committee initially consisting of three members of the Graduate Studies Committee. The chair of the Graduate Studies Committee will meet with the student and prepare an initial program of course study, as described above.

After passing the Qualifying Exam and prior to taking the Preliminary Exam, Ph.D. students, in consultation with the research advisor and with the approval of the department chair, should select the rest of the Advisory Committee members and file the form (http://www.mtu.edu/gradschool/administration/academics/forms-deadlines/pdfs/advisor-committee.pdf) with the department and Graduate School. The Advisory Committee includes the research advisor and the two members of the graduate faculty from the physics department who will ultimately serve on the dissertation committee. The primary purpose of the Advisory Committee is to guide and monitor the research work of the student. A graduate faculty member external to the Department of Physics is required for the final dissertation defense but may be invited to participate on the Advisory Committee sooner.

III. Graduate Degree Requirements

The focus of the graduate program in the Department of Physics is on the Ph.D. in Physics. Students are generally admitted into the department's graduate program based on an assessment of their ability to succeed as doctoral students. Most students in pursuit of a Ph.D., who when admitted into the graduate program do not already possess an MS degree or its equivalent, can readily obtain a Master of Science in Physics degree according to Plan D outlined below. Students wishing to terminate their graduate study with a Master's degree are strongly encouraged to pursue the thesis option - Plan A. Plan B, the project option, is available to students under special circumstances.
Graduate courses expected to be offered by the Department of Physics, and a tentative schedule under semesters, are as follows:

<table>

*offered on demand

Other 4000-level physics or related courses may also be of interest. In addition, the department offers PH5975 Full Time Master's Research, PH5999 Master's Research, PH6975 Full Time Doctoral Research, and PH6999 Doctoral Research, with separate sections assigned to each faculty advisor.

Certain courses in physics are considered foundational for all students seeking MS or Ph.D. degrees in physics, irrespective of intended research specialty. Course work is not limited to preparation for specific research work, but has been selected to provide a general physics education to act as a foundation for future study and a career in physics. A grade of B or better is officially required by all MS and Ph.D. graduate students in the following core courses (15 credits):

**Core Courses** (credits)

- PH5010 Graduate Journal Club (1)
- PH5110 Classical Mechanics (2)
- PH5210 Electrodynamics I (3)
- PH5310 Statistical Mechanics (3)
- PH5320 Mathematical Physics (3)
- PH5410 Quantum Mechanics I (3)
In addition, a grade of B or better is required in at least two of the following courses:

**Disciplinary Electives**

Exemptions from taking any of the required courses on the basis of prior graduate work are to be determined by the Graduate Studies Committee chair in consultation with the department chair.

**A. Master of Science in Physics**

1. Plan A - Thesis Option

   Students intending to terminate their graduate study at the Master's level are encouraged to pursue Plan A. In addition to the course work requirement outlined above, the remaining credits (not less than six) of the total 30 required by the Graduate School are taken as Graduate Research (PH5999). University policy requires that at least two thirds of the course work be completed in residence at Michigan Tech.

   A degree schedule (Form M4 - see below) must be filed with the Graduate School the term prior to the final defense. Approval of the degree schedule is necessary before the final oral examination may be scheduled.

   Students should select an advisor and Advisory Committee during their second term, and file an Advisor and Committee Recommendation form with the Graduate School. No later than two weeks prior to the proposed oral examination date the student, in consultation with the research advisor, must complete the Pre-Defense Form to schedule the exam time and place. Completing this form should be done in consultation with Kathy in the department office. A title and abstract should be submitted to Kathy one week before the oral examination so that announcements can be sent to the department and University community.

2. Plan B - Project Option.

   This option is available to students under special circumstances. Students interested in this option should consult with their research advisor and the Chair of the Graduate Studies Committee.
3. Plan D - Course-Work Option

This option is designed for students pursuing the Ph.D. in Physics who when admitted into the graduate program do not already possess an MS degree in Physics or its equivalent. Students with advanced preparation in pursuit of the Ph.D. in Physics might skip the MS degree altogether upon the recommendation of their Advisory Committee. Please be aware that the following degree requirements are much more stringent than the minimum requirements dictated by the Graduate School for Plan D.

The course work requirement for the Master of Science in Physics is a grade of B or better in graduate courses approved by the student's Advisory Committee totaling 30 credit hours, including the core course and disciplinary elective requirements listed above under the plan A option. In addition, six credits of Graduate Research (PH5999 or PH6999) must be earned. A thesis is not required. However, the research serves both as the beginning of the doctoral research and the basis of the Preliminary Examination described below.

The student, in consultation with the Graduate Studies Committee, will file all necessary forms (M forms) for students completing a Master's degree in Physics under Plan D.

Current versions of all tracking forms are available online at: [http://www.mtu.edu/gradschool/administration/academics/forms-deadlines/](http://www.mtu.edu/gradschool/administration/academics/forms-deadlines/).

**Note for International Students:** Visa requirements for international students often change. International students should stay well informed of current visa requirements through the offices of International Programs or Graduate School related to timelines and possible changes of status after graduation.

B. Doctor of Philosophy in Physics

1. Residency

University policy requires that doctoral students spend at least four semesters (including summer) on campus at Michigan Tech beyond attainment of a bachelor's degree or two semesters on campus at Michigan Tech beyond attainment of a Master's degree in a formal program of study and research under direct supervision. Continuous enrollment in the fall and spring semesters is also required. This requirement may be waived under special circumstances with pre-approval. See the Graduate School Catalog for details.

2. Course Work
A minimum of 30 course and/or research credit hours beyond the MS degree, or a minimum of 60 course and/or research credit hours beyond the Bachelor's degree are required for the Ph.D. degree.

The core course and disciplinary elective requirements are detailed above. Additional course work is determined by the student's Advisory Committee, and early discussions with the committee in this regard are recommended.

Once students have a research advisor they may enroll in Doctoral Research (PH6999). After all required courses are completed, and no later than the semester prior to the final oral examination, the D5 form should be completed, reviewed by the Chair of the Graduate Studies Committee, and filed with the Graduate School.

3. Qualifying (Comprehensive) Examination

Students accepted into the physics Ph.D. program of the Department of Physics must take a written Qualifying Examination. The Qualifying Examination will be authored and administered by the Qualifying Examination Committee and will cover four areas: classical mechanics (including introductory special relativity), electricity and magnetism, quantum mechanics, and general physics. Sample examinations are available on the web at http://www.phy.mtu.edu/qual.html. Questions regarding the qualifying exam policies may be directed to the chair of the Qualifying Exam Committee (listed on page one).

Problems in the areas of classical mechanics, electricity and magnetism, and quantum mechanics may be solved using techniques taught at the advanced undergraduate level. Representative materials for these subjects are listed below:

**Classical Mechanics**

**Electricity and Magnetism**

**Quantum Mechanics**

The general physics section of the exam will consist of short questions covering all areas of physics normally taught at the undergraduate level including mechanics, special relativity, electromagnetism (including AC and DC circuits), quantum and atomic physics, thermal and statistical physics, optics, and laboratory techniques including data analysis.
The Qualifying Examination will be given twice each year during the second and third weeks of the fall and spring semesters. Typical fall and spring schedules follow. Be sure to confirm exam times and exam rooms in advance with the department coordinator.

Fall Semester:

- **Week 2**
  - Thursday 7:00 – 9:00 p.m. classical mechanics
  - Saturday 3:00 – 5:00 p.m. electricity and magnetism
- **Week 3**
  - Thursday 7:00 – 9:00 p.m. general physics
  - Saturday 3:00 – 5:00 p.m. quantum mechanics

Spring Semester:

- **Week 2**
  - Thursday 7:00 – 9:00 p.m. classical mechanics
  - Saturday 2:00 – 4:00 p.m. electricity and magnetism
- **Week 3**
  - Thursday 7:00 – 9:00 p.m. general physics
  - Saturday 2:00 – 4:00 p.m. quantum mechanics

Exam books (blue books) will be provided. All work must be done in the exam books. When solving electricity and magnetism problems, a consistent set of units must be used; the system of units being used should be stated at the beginning of the problem. No handbooks or calculators are allowed. Any needed mathematical information will be provided.

Students are encouraged to take the Qualifying Examination the first time it is given following their arrival on campus. They may do so without penalty. This “free shot” does not count as one of the two attempts that students are allowed to pass the exam. The main purpose of the “free shot” is to acquaint new students with the exam. Students who pass the entire exam on the free shot fully satisfy the Qualifying Examination requirement. Any of the four areas passed on the “free shot” need not be retaken in future attempts. Students who elect to take the “free shot,” but do not pass the exam in its entirety, are required to take their first attempt as described in the following paragraph.

Students who enter the Ph.D. program during the summer or fall semester are required to take the Qualifying Examination no later than the fall semester of the following year; students who enter the Ph.D. program during the spring semester are required to take the Qualifying Examination no later than the spring semester of the following year. Students are allowed two attempts to pass the Qualifying Examination. Passing scores in each of the four areas are required to pass the exam.

Students typically will be informed of the outcome of the written exam within three weeks of the last of the scheduled examination dates. The outcomes of the exam are either a pass or a fail for each area of the exam. Any of the four areas not passed during the first attempt must be retaken the next time the Qualifying Examination is given. If after the second attempt students have not passed all four areas of the exam, the Qualifying Exam Committee will recommend that those students be dismissed from the Ph.D. program, except as noted below.

If after the second attempt a student has passed all areas except one, an ad hoc committee may be formed consisting of the Qualifying Exam Committee, department, and Graduate Studies Committee chairs, as well as the student’s research advisor. This ad hoc committee will determine whether or not it is appropriate to continue the failed area of the exam to allow the student an opportunity to demonstrate his/her knowledge in the subject area using
an alternate format. If a continuation is warranted, it may consist of an oral exam, the requirement that the student take a specified course and earn the grade of B or better, or some similar activity that may be evaluated. The continuation activity cannot consist of a third attempt of the Qualifying Examination. The successful completion of the continuation activity will result in a pass for the area of the Qualifying Examination that had been initially failed.

The Report on Comprehensives Form must be filed in the department with Kathy, through the Chair of the Graduate Studies Committee, after passing the Qualifying Exam.

4. Preliminary Examination (Research Proposal Examination), Ph.D.

The Preliminary Exam (Research Proposal Examination) is taken after the Qualifying Exam has been passed. It is administered by the student's Advisory Committee for the purpose of reviewing the student's proposed plan for research. Once a student has identified a research problem in consultation with his or her research advisor, has become familiar with the related literature, and has devised a plan for research, the Preliminary Exam should be scheduled. A paper describing the proposed research, not exceeding fifteen pages in total length, should be distributed to the Advisory Committee one week prior to the scheduled exam. The student should prepare a 30-minute talk outlining both the problem and the proposed research methods. The remainder of the exam will be devoted to questions and answers related to the proposed research. No special form is needed for scheduling the Preliminary Exam although the Graduate Studies Committee chair should be informed of the committee members (D2 form may need updating). Please see Kathy in the main office to schedule a room, and to advertise the talk to the department and University community.

Form D6 should be filed with the Graduate School upon successful completion of the Preliminary Examination.

5. Doctoral Dissertation and Final Oral Examination

The final examination may be scheduled anytime after a period of two academic semesters following the successful completion of the preliminary exam and upon completion of the dissertation in satisfactory form. It is the responsibility of the student to be aware of the most current policies and rules regarding graduation (check with the Graduate School and their website). Two weeks prior to the final examination a completed draft of the dissertation prepared in accordance with the manual "Instructions Concerning the Preparation of Theses and Dissertations" must be distributed to the examining committee. The examining committee consists of the three members of the student's Advisory Committee and a fourth member chosen from a cognate department or program. The Pre-Defense Form is used to schedule the final oral examination and it is the responsibility of the student to obtain all necessary signatures and file it in the Graduate School. The student should see Kathy in the main office to schedule a room for the defense and to request any special audio-visual equipment. A title and abstract should be submitted to Kathy one week before the oral examination so that announcements can be sent out to the department and University community.

Kathy will supply advisors with necessary departmental assessment forms and Graduate School forms for the final defense. Following the defense, students shall incorporate any corrections and suggestions of the examining committee into the final dissertation. Students can familiarize themselves with the deadlines, dissertation submission policies, and necessary graduation forms on the Graduate School website at:
Note to International Students: Visa requirements for international students often change. International students should stay well informed of current visa requirements through the offices of International Programs or the Graduate School related to timelines and possible changes of status after graduation.

6. Time Limit

The Graduate School requires that the comprehensive (Qualifying) examination must be taken within five years, and all requirements must be completed within eight years, from the time of a student's first enrollment in the doctoral program.

7. Doctoral Form Submission Schedule

C. Doctor of Philosophy in Engineering Physics

The Doctor of Philosophy in Engineering Physics is designed to train students for industrial and academic jobs through the study and application of the principles of physics to analyze, evaluate, and solve engineering problems. The emphasis of the program is to prepare the student to address problems of current technological importance in an interdisciplinary fashion, without regard to formal boundaries between the fields of engineering and physics. The Ph.D. in Engineering Physics meets an important need in today’s world: to train scientists capable of tackling the technical problems of today and tomorrow in an increasingly multi-disciplinary technological environment. This degree is a natural spin off of the current Ph.D. in Physics program, and enjoys strong interdisciplinary collaborations and joint appointments with the departments of Materials Science and Engineering, Electrical and Computer Engineering, and Mechanical Engineering-Engineering Mechanics.

Degree requirements for the Ph.D. in Engineering Physics are similar to those for the Ph.D. in Physics. Differences are explained below.

1. Advisors and Advisory Committee

Students will initially be assigned the Chair of the Engineering Physics Graduate Studies Committee as their advisor who will help to prepare an initial course of study during orientation before the student’s first semester begins. By the end of the second term in residency each student selects a research advisor who will serve to guide and direct the student’s subsequent course of study and research, and to chair the student’s Advisory Committee. After choosing a research advisor, the D2 form should be filed with the Graduate School. By the end of the second semester in the program, a four or more member Advisory Committee should be formed whose purpose is to assist in guiding and monitoring the research work of the student. In addition to the research advisor, the Advisory Committee must consist of three other members, including at least one member of the graduate faculty from the physics department and at least one member of the graduate faculty from a cognate engineering department. The Advisory Committee will ultimately serve on the student’s examining committees. Committee members are chosen by the research advisor and the student, with approval of the department chair. An Advisor and Committee Recommendation Form naming the advisor and Advisory Committee should be filed with Kathy in the department office. Note that choosing an Advisory Committee is required for students in the Engineering Physics Ph.D. program sooner than may be required by other programs.
2. Course Work

A grade of B or better is required in the following core courses:

**Core Courses (credits)**

<table>
<thead>
<tr>
<th>Course Code</th>
<th>Course Title</th>
<th>Credits</th>
</tr>
</thead>
<tbody>
<tr>
<td>PH5010</td>
<td>Graduate Journal Club</td>
<td>1</td>
</tr>
<tr>
<td>PH5110</td>
<td>Classical Mechanics</td>
<td>2</td>
</tr>
<tr>
<td>PH5210</td>
<td>Electrodynamics I</td>
<td>3</td>
</tr>
<tr>
<td>PH5310</td>
<td>Statistical Mechanics</td>
<td>3</td>
</tr>
<tr>
<td>PH5320</td>
<td>Mathematical Physics</td>
<td>3</td>
</tr>
<tr>
<td>PH5410</td>
<td>Quantum Mechanics I</td>
<td>3</td>
</tr>
</tbody>
</table>

Exemptions from taking any of the required core courses on the basis of prior graduate work are to be determined by the Engineering Physics Graduate Studies Committee chair in consultation with the Department Chair.

In addition, a grade of B or better is required in at least three courses at the 4000 level or higher, and at least one course at the 5000 level or higher, in the student’s chosen area of specialization and as approved by the student’s Advisory Committee. Additional courses may also be required by the student’s Advisory Committee. Early discussions with the committee in this regard are highly recommended. Typical courses could include:

- EE4254 Image Processing
- EE5340 Statistical Optics
- EE5410 Engineering Electromagnetics
- EE5430 Electronic Materials
- EE5440 Laser Types, Laser Design, Modeling Techniques, and Nonlinear Optics
- EE5460 Solid State Devices
- EE5520 Fourier Optics
- EE6410 Advanced Engineering Electromagnetics
- EE6420 Interaction of Electromagnetic Waves and Materials
- EE6450 Theory of Devices
- EE6470 Thin Films

- MY4530 Surfaces and Interfaces
- MY4700 Electronic Properties of Materials
- MY4710 Materials Science/Electronic Devices
- MY5100/5110 Thermodynamics and Kinetics I & II
- MY5400 Mechanical Behavior of Materials
- MY5550 Solid Surfaces
- MY6100 Computational Materials Science and Engineering
- MY6110 Advanced Topics in Materials Processing
- MY6200 Advanced Topics in Materials Characterization
- MY6400 Advanced Topics in Mechanical Behavior of Materials
PH5211 Electrodynamics II  
PH5411 Quantum Mechanics II  
PH5510 Theory of Solids  
PH5520 Materials Physics  
PH5640 Atmospheric Physics  
PH5680 Atmospheric Fluid Dynamics

Required courses will be listed and verified at least one semester before the final oral defense is scheduled on the Degree Schedule form (D5).

3. Qualifying (Comprehensive) Examination

Students accepted into the Engineering Physics Ph.D. program must pass the Qualifying Examination, which is composed of a physics component and an engineering component. Questions regarding the Qualifying Exam policies may be directed to the Qualifying Exam Committee chair (listed on page 1).

The physics component of the Qualifying Exam will cover three of the four following areas, to be chosen in advance, by the student: classical mechanics (including special relativity), electricity and magnetism, quantum mechanics, and general physics. Sample examinations are available on the web at http://www.phy.mtu.edu/qual.html. Each of these areas will be covered in a separate two-hour written examination. Problems in the areas of classical mechanics, electricity and magnetism, and quantum mechanics may be solved using techniques taught at the advanced undergraduate level. Representative materials for these subjects are listed below:

**Classical Mechanics**

**Electricity and Magnetism**

**Quantum Mechanics**

The general physics section of the exam will consist of short questions covering all areas of physics normally taught at the undergraduate level including mechanics, special relativity, electromagnetism (including AC and DC circuits), quantum and atomic physics, thermal and statistical physics, optics, and laboratory techniques including data analysis.
The Qualifying Examination will be given twice each year during the second and third weeks of the fall and spring semesters. Typical fall and spring schedules follow. Be sure to confirm exam times and exam rooms in advance with the department coordinator.

**Fall Semester:**
- **Week 2** Thursday 7:00 – 9:00 p.m. classical mechanics
- **Week 2** Saturday 3:00 – 5:00 p.m. electricity and magnetism
- **Week 3** Thursday 7:00 – 9:00 p.m. general physics
- **Week 3** Saturday 3:00 – 5:00 p.m. quantum mechanics

**Spring Semester:**
- **Week 2** Thursday 7:00 – 9:00 p.m. classical mechanics
- **Week 2** Saturday 2:00 – 4:00 p.m. electricity and magnetism
- **Week 3** Thursday 7:00 – 9:00 p.m. general physics
- **Week 3** Saturday 2:00 – 4:00 p.m. quantum mechanics

Exam books (blue books) will be provided. All work must be done in the exam books. When solving electricity and magnetism problems, a consistent set of units must be used; the system of units being used should be stated at the beginning of the problem. No handbooks or calculators are allowed. Any needed mathematical information will be provided.

Students are encouraged to take the physics component of the Qualifying Exam the first time it is given following their arrival on campus. They may do so without penalty. This “free shot” does not count as one of the two attempts that students are allowed to pass the exam. The main purpose of the “free shot” is to acquaint new students with the exam. Students may elect to take up to all four areas of the exam on the “free shot”, if desired. Students who pass three areas of the exam on the free shot fully satisfy the physics component of the Qualifying Examination requirement. Any of the areas passed on the “free shot” need not be retaken in future attempts. Students who elect to take the “free shot” but do not pass the physics portion (three sections) of the exam are required to take their first attempt as described in the following paragraph, which applies to all students.

Students who enter the Ph.D. program during the summer or fall semester are required to take the physics component of the Qualifying Examination no later than the fall semester of the following year; students who enter the Ph.D. program during the spring semester are required to take the physics component of the Qualifying Examination no later than the spring semester of the following year. Engineering Physics Ph.D. students must pre-select the three exam areas they need to pass, by the deadline set by the department coordinator. Students are allowed two attempts to pass the physics component of the Qualifying Examination. Passing scores in each of the three pre-selected areas are required to pass the physics component of the exam. Students may not change the three pre-selected areas for the second and final attempt if a second attempt is necessary.

Students typically will be informed of the outcome of the written exam within three weeks of the last of the scheduled examination dates. The outcomes of the exam are either a pass or a fail for each area of the exam. Any of the three areas not passed during the first attempt must be retaken the next time the physics portion of the Qualifying Examination is given. If after the second attempt students have not passed all three areas of the exam, the
Qualifying Exam Committee will recommend that those students be dismissed from the Ph.D. program, except as noted below.

If after the second attempt a student has passed all areas except one, an ad hoc committee may be formed consisting of the Qualifying Exam Committee, department, and Engineering Physics Graduate Studies Committee chairs, and the student’s research advisor. This ad hoc committee will determine whether or not it is appropriate to continue the failed area of the exam to allow the student an opportunity to demonstrate his/her knowledge in the subject area using an alternate format. If a continuation is warranted, it may consist of an oral exam, the requirement that the student take a specified course and earn the grade of B or better, or some similar activity which may be evaluated. The continuation activity cannot consist of a third attempt of the physics component of the Qualifying Examination. The successful completion of the continuation activity will result in a pass for the area of the physics component Qualifying Examination that had been initially failed.

The engineering member(s) of the student's Advisory Committee shall formulate the engineering component of the Qualifying Examination that is two to three hours in length and appropriate to the student’s chosen area of engineering physics interest, focusing on fundamentals related to but not on the student's current research. The format of the engineering component of the Qualifying Examination shall be determined by the student's Advisory Committee. The engineering component of the Qualifying Examination should be taken by the end of the spring semester of the second year. Students may have two attempts to pass this exam before the end of their second year in the program.

4. Preliminary Examination (Research Proposal Examination)

The Preliminary Exam (Research Proposal Examination) is taken after the Qualifying Exam has been passed. It is administered by the student’s Advisory Committee for the purpose of reviewing the student’s proposed plan for research. Once a student has identified a research problem in consultation with his or her research advisor, has become familiar with the related literature, and has devised a plan for research, the Preliminary Exam should be scheduled. A paper, not exceeding 15 pages, describing the proposed research should be distributed to the Advisory Committee one week prior to the scheduled exam. The student should prepare a 30-minute talk outlining both the problem and the proposed research methods. The remainder of the exam will be devoted to questions and answers. Form D6 should be filed with the Graduate School upon successful completion of the Preliminary Examination.

D. Student Responsibilities

It is the responsibility of each physics graduate student to be familiar with physics department policies as outlined in this handbook, and with Graduate School policies as outlined in the Graduate School Catalog. It is the responsibility of each physics graduate student to be sure that Masters (M) or Doctoral (D) forms are completed and authorized in a timely fashion, and are filed with the secretaries in the physics department office.
IV. Illustrative Time Line For Academically Well Prepared Ph.D. Physics Graduate Students

Year 1 - (assuming fall entry)
- September: Qualifying Examination (free shot)
- 2-3 physics courses each semester (9 credits)
- Funding via a teaching assistantship
- 20 hours of work/week, typically in introductory physics labs.
- January: Qualifying Examination
- Spring of year 1- select a research advisor
- Summer of year 1- begin research
  If funded by a GRA, ~40 hrs/week; if GTA, ~20 hrs/week

Year 2 -  1-2 courses/semester
- Divide remaining time between research and teaching (if still on GTA)
- September- retake un-passed Qualifying Examination sections if necessary

Year 3 - Little coursework. Divide time between research and teaching (if still on GTA)
- Take Preliminary Exam in the fall or winter

Years 4 & 5 - finish research
- Write thesis (no more than 6 months)
- Submit 1-2 co-authored manuscripts for publication in a refereed journal, in collaboration with your research advisor
- During years 3-5, you should have attended and presented talks and/or posters at a few national meetings
- Final dissertation defense
- Latter part of year 5 make plans for the rest of your life (job searching, etc.)

Note that with a GRA you are being paid to do your thesis research.
With a GTA, you have a job in addition to your thesis research.
Note also that some teaching experience is valuable for most jobs.
